

# EXHIBIT C

The knowledge and resource gap between institutional investors and retail investors widens each year. We're building a game-changing research automation platform for self-directed investors to level the playing field.

### Our Story

Our team has built pioneering AI and language processing technology for government agencies, corporations, and heads of state. This proven technology is being used today for early warning systems, national security, and public health.

### Our Inspiration

When the 2020 pandemic prompted unprecedented market volatility, institutional investors saw opportunity in patterns, and profited heavily. We knew we could use AI to expose that "pro" playbook, so that any investor can identify those same patterns.

### Our Vision

We are driven to level the playing field for investors who need tools that are simple, transparent, and professional-grade. LevelFields' powerful AI technology is accessible and affordable, so that every investor can realize a vision for financial security.

# A bit more about LevelFields and AI Trading

Great investors are made not born. But you shouldn't have to work on Wall Street to invest like one. We exist to equip you with the tools to unlock your full potential and eliminate the laborious research that gets in your way.

Who are we? We are a team of software engineers, linguists, data scientists and entrepreneurs who see the world not as it is, but as it could be. Many of us worked together at a previous company where we built event-monitoring systems for train derailments, cyber breaches, reputation threats, and misinformation spread for public companies and governments.

When COVID-19 began affecting the stock market in 2020, things got personal. Our friends and family were unsure how to react. We knew that the answer was in data, but realized there was no resource for individual investors that puts event-based data into context.

Leveraging decades of experience in machine learning and contextual analysis, we created a novel AI platform to identify patterns from market altering events so that we can all quickly find these events and understand how to react to them.

## LevelFields AI Stock Trade Discovery in Action

Every minute of every day, LevelFields' AI does the heavy lifting for our members. The technology screens millions of signals related to over 6,000 stocks, sifting through the noise to find those events that affect prices, and using historical data to expose patterns and put those events into context so stock and options traders can better understand entry and exit points.

## Case Study on EBON: Following a short

Before market open on April 6, 2021, LevelFields alerts users of a Short Seller Report on EBON. Based on this scenario's one-month trend in price movements, a trader could buy an 'at the money' put option the same day at \$1.03 and sell one month later for a 123% gain.

[See More](#)

## Case Study: Gamestop. From the start

## Case Study: New CEO sparks rebound

LevelFields alerts users to an Activist Investor buying stock in GME on Aug. 31, 2020. Based on scenario data showing past 6- to 12-month price gains, a long position is entered the same day. Within 45 days, the stock is up 119%. When the famed short squeeze kicks in a few months later, there are many opportunities to sell at a 1000+% return.

[See More](#)

LevelFields alerts users to the hiring of a new CEO at struggling NTNX. Scenario data trends suggest a rebound over the long-term, and short-term pops under certain conditions. A position entered on the event day at \$21 would have enabled a one-day exit at +30%. Investors holding for 3 to 6 months would have enjoyed 30% to 50% returns.
